

1 calculate simple interest

```
#include <stdio.h>
int main() {
float P=10,R=34,N=12;
float SI = P*R*N / 100;
printf("Interest = %f",SI);
return 0;
}
```

A screenshot of a terminal window with a dark background. The first line of output is "Interest = 40.799999" in a light blue font. The second line is "=== Code Execution Successful ===" in a light green font.

Interest = 40.799999

=== Code Execution Successful ===
